HOW TO INJECT WATER IN THE TANK

Pull out the water tank from the bottom of the back (air cooler), and leak 1/3 of water tank while inject fair water into it.

- Please note the display of water level when injecting water.
- The water level of water tank must be less than “max.” when injecting water.
- The water level of water tank must be more than “min.” when air cooler is with cooling and humidify.
- The frozen ice boxes (or ices) are put into water tank when the client want to get the cooler wind.

Warning:

The water level of water tank is less than “MAX” after ice boxes(or ices) is put water tank.

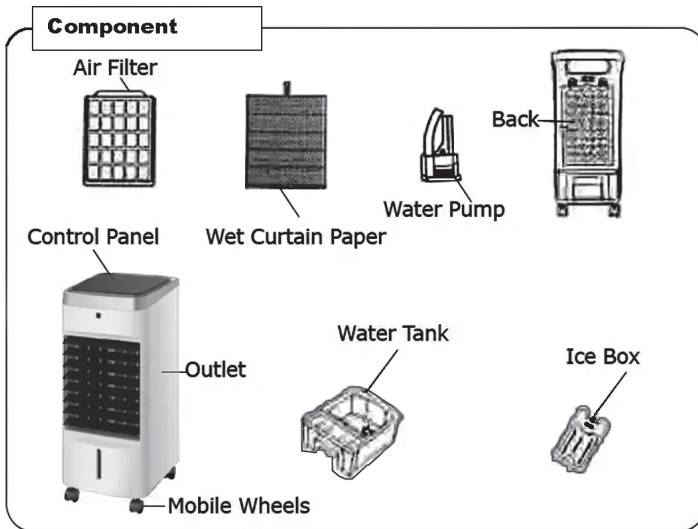

The image shown here is for illustrative purposes only and may be subject to change.

HOW TO USE ICE BOXES

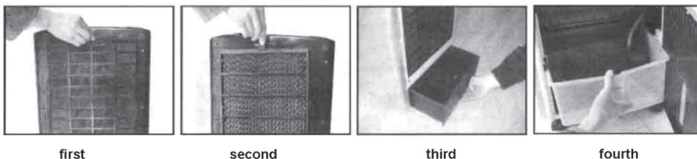

Ice box can store cool and slowly absorb the heating from water while ice boxes can make the temperature of water in the water tank less than it of the surrounding. So Air cooler with frozen ice boxes can blow the cooler wind.

- Put ice boxes in fridge. After ice boxes are frozen successfully, take ice boxes out the fridge.
- Pull the water tank out, and put the frozen ice boxes into water tank.
- One piece air cooler is with two pieces ice boxes in order that the client can make them continuously.

Accessory type and quantity may vary depending on the model.
