

BREWING STYLES

CLASSIC

Smooth, well-balanced flavor.

OVER ICE

Specially designed to brew hot over ice for freshly brewed iced coffee that is not watered down.
Always fill your vessel to the top with ice cubes before brewing Over Ice.

SPECIALTY

A super-rich concentrate that allows you to make coffee-based drinks like cappuccinos and lattes.
Will only brew 4 oz.

RICH

More intense flavor that stands up to milk, cream, or flavoring.

COLD BREW

Brewed at a lower temperature over ice for an ultra-smooth, deep, and sweet flavor.
Always fill your vessel to the top with ice cubes before brewing Cold Brew.

NOTE: Over Ice and Cold Brew are designed to produce a concentrated brew into a vessel filled with ice. It is normal for some ice in the vessel to melt as the coffee is brewed, and this will produce a cold beverage with the ideal strength and flavor.

NOTE: We recommend running Cold Brew before any hot brews for the best output. If coming from a hot brew, Cold Brew may take a minute or two to start.

NOTE: Rich brew will use slightly less water and yield slightly less brewed coffee than Classic brew. See Approximate Brew Volumes chart for additional information.

HOW TO BREW

- 1 Use the Multi-Serve arrow buttons to select the brew size. Place the empty vessel or carafe under the brew basket.

NOTE: If making a single cup, lower the Single-Serve Cup Platform and set your vessel in the center of it to help prevent splashing. This applies to all brew styles.
- 2 Press the STYLE button until your desired drink is illuminated. Then, press BREW. To cancel the brew at any time, press the selected brew style again or press the Power button.

NOTE: The brewing cycle will begin, then pause for a short period before resuming. This process is used to evenly saturate the coffee grounds. This applies to all brew styles.
- 3 The brewer will beep to signal the brew has started. The progress bar between the arrows will illuminate to indicate the progress of the brew. When the brew is finished, the machine will beep again and End will appear on the display.

NOTE: During a pod brew, if the machine displays "CHEC POD", refer to the troubleshooting guide.

INTELLIGENT WARMING PLATE

The Intelligent Warming Plate will automatically turn on during Classic or Rich brews when a 1/4, 1/2, 3/4, or full carafe size is selected. The Intelligent Warming Plate is set to a specific temperature to avoid burning the coffee over time. To turn the warming plate on at any time, use the Multi-Serve Arrow buttons to select one of the carafe sizes and press the WARM button.

IMPORTANT: The  light on the base of the brewer will illuminate only when the warming plate is hot and will remain illuminated until the plate has cooled down.

TIME & TEMPERATURE ADJUSTMENT

You can adjust how long the Intelligent Warming Plate remains on (up to 4 hours) and/or set the temperature to High, Medium, or Low.

By default, the Intelligent Warming Plate is set to remain on for 2 hours at Medium temperature. To change the time and/or temperature setting of your warming plate, follow these instructions:

- 1 Press and hold WARM until the clock begins to flash the current warming time.

2 Use the Multi-Serve Arrow buttons to increase the time in 15 minute increments up to 4 hours or decrease the time to 0 hours. Press WARM button to set the new time.

3 Next, the clock will display the current warming plate temperature. To keep the same temperature, press WARM. To change the temperature, use the Multi-Serve Arrow Buttons and press WARM for the temperature to lock in. The unit will beep signifying that the time and temperature has been set.

NOTE: If you set the warming time to 0 hours, Keep Warm will not automatically activate during or after a carafe brew cycle, but you can still turn it on manually by pressing the WARM button when a carafe size is selected.

NOTE: The time adjustment setting will be saved and will not reset when the brewer is unplugged or loses power.

SETTING THE DELAY BREW

- 1 Fill the water reservoir to desired size and add ground coffee to the filter or insert a pod in the Ninja Pod Adapter, close the coffee maker lid, and place the appropriate-size vessel under the brew basket.

2 Press DELAY. DELAY will illuminate and the clock will begin to flash "12:00" or the last time that was set.

3 While the clock is flashing, use the Multi-Serve Arrow buttons to adjust the hour. The AM or PM indicator will illuminate on the clock display as you are setting the desired time. Press DELAY button again and use the Multi-Serve Arrow buttons to adjust the minute. Press DELAY to lock in the time.

4 Once the desired time has been set, use the Multi-Serve Arrows to select the size that you would like to brew.

5 Press the STYLE button until your desired drink is illuminated.

6 Once the time, brew size, and brew style have been set, press the DELAY button to activate. When activated, the brewer will beep and the DELAY LED and your selected options will remain illuminated. To view your set delay brew time, press and hold the DELAY button. To cancel, press DELAY again or power off the coffee maker.

NOTE: The brewer must remain on for the Delay Brew function to work. **DO NOT** power off or unplug after setting Delay Brew. If the brewer is turned off or unplugged, delay brew will need to be reset.

NOTE: The clock will remain on even if the brewer is turned off. Ensure the brewer is powered on to set Delay Brew.

USING THE DRIP STOP

The drip stop is used to close off the brew basket to prevent any coffee from dispensing. You will need to manually open and close the drip stop by moving the lever to your desired position. It can be closed and reopened at any point before, during, or after a brew.

If you forget to open the Drip Stop, the brewer will pause the brew, and after 30 seconds it will give you a friendly audible reminder. After 5 minutes, the brew will be canceled.

NOTE: If the Drip Stop is closed before you begin a brew, the brewer will notify you with 3 beeps and the Drip Stop indicator will illuminate. Move the Drip Stop to the open position and press the STYLE button until your desired drink is illuminated. Then, press BREW.

CLOSING THE DRIP STOP AFTER A BREW
When the brew cycle is complete, set the Drip Stop to the closed position to stop dripping from the brew basket. While the Drip Stop is closed, the Drip Stop indicator will illuminate.

NOTE: Remember to open the Drip Stop when you are ready to brew again. If you forget, your brewer will give you a friendly audible reminder.

ADAPTER STORAGE

The adapter storage can be installed on the unit for onboard storage of either the Ninja Pod Adapter or Ninja Grounds Adapter. The Adapter Storage can be installed and removed at any time. To install the Adapter Storage:

- 1 Securely fit the Adapter Storage pins into the holes on the back of the coffee maker.

- 2 Store either the Ninja Pod Adapter or Ninja Grounds Adapter in the adapter storage.

CLEANING & MAINTENANCE

CLEANING AFTER A BREW

- 1 After the coffee maker has cooled, remove the Ninja Grounds Adapter and brew basket. If using pods, remove the Ninja Pod Adapter and brew basket. Wash the used parts thoroughly with warm soapy water, or place in dishwasher.

2 Wash the carafe and brew-through lid with warm soapy water, or place in dishwasher. Use a bottle brush or cloth to wash the inside of the carafe. **DO NOT** use a wire brush.

NOTE: For best results, we recommend rinsing the reservoir after brewing and refilling with fresh water for the next brew.

CLEANING THE WATER RESERVOIR

Empty the reservoir and hand-wash or place in dishwasher. For a better clean, we recommend placing it in the bottom rack of the dishwasher standing upright with the opening facing downward. We recommend doing this weekly.

CLEANING THE CARAFE

We recommend cleaning your carafe after each use with warm, soapy water.

To clean the carafe more thoroughly, we recommend using a soft foam brush.

DO NOT use a wire brush to clean the carafe.

DISHWASHER-SAFE PARTS:
Reservoir, Carafe, Ninja Grounds Adapter, Ninja Pod Adapter, Adapter Storage, Brew Basket, Scoop, and Frother

INTEGRATED FROTHER

The Integrated Frother does not heat milk.

- 1 Add milk to your cup until it is about 1/3 full.
• For cold froth, continue to Step 2.
• For hot froth, microwave for 45-60 seconds.

- 2 Swing the arm of the frother toward the front of the coffee maker. Install the frother whisk by twisting it to the right.

- 3 Hold the cup under the frother and submerge the whisk just below the surface of the milk. Press and hold the button on top of the frother and froth for 30-45 seconds.

- 4 Remove the frother whisk by twisting it to the left. Keep your cup below the whisk while you carry it to your sink or dishwasher for easy cleaning.

WARNING: To avoid contact with steam and hot surfaces, **DO NOT** reach across top of coffee maker to froth.

CLEANING & DESCALING YOUR BREW SYSTEM

The clean cycle is used for descaling the brewer when calcium scale buildup is affecting the performance of the brewer and/or the flavor of your coffee. The Intelligent Clean Cycle Indicator will automatically illuminate orange when a cleaning cycle is recommended for your brewer.

To clean and descale your Ninja DualBrew Coffee Maker:

- 1 Place the empty carafe beneath the brew basket.

2 Fill the water reservoir with 16 oz. of white vinegar, then fill the rest of the reservoir with water up to, but not exceeding, the Full line.

OR

Use a descaling solution specifically formulated for coffee maker cleaning and follow the directions on the package.

NOTE: The clean cycle takes approximately 75 minutes.

IMPORTANT: Only use white vinegar.

NOTE: If the display ever reads "CLOG," it indicates heavy or residual coffee ground buildup. Refer to the "CLOG" section in the troubleshooting guide.

NOTE: Running a water-only clean cycle will not descale the brewer properly.

- 3 Once the water reservoir is filled with your cleaning solution and water mixture, press the CLEAN button. The display will highlight the full carafe and 60 oz. which is the amount that will be brewed. Then press the CLEAN button again to confirm and begin the cleaning cycle.

TROUBLESHOOTING GUIDE

CLOCK DISPLAY MESSAGES:

CLOG

- If this appears on your control panel, this means either there are grounds built up inside the top or bottom needles or calcium scale buildup in the brew system.

1 Ensure that the top and bottom of the pod you are using is punctured.

a. If the pod was punctured, go to step 2

b. If the pod wasn't punctured, place a new pod in the Ninja Pod Adapter and close the lid. Open the lid to see if there are any grounds in the top needle located on the lid.

c. If the new pod still did not puncture, please contact service center.

- 2 Your unit came with a De-Clog Tool. Remove the Ninja Pod Adapter and install the Ninja Grounds Adapter, then insert the De-Clog Tool with the open side facing up. After De-Clog tool is installed, fill it with water.

3 Close the lid of the coffee maker until it makes contact with the De-Clog Tool, then pump the lid down until you feel slight resistance 10 times. **Do not close the lid all the way.**

4 After removing the De-Clog Tool, restart the system by powering off the coffee maker and turning it back on. Then run a water-only 12 oz. brew to clear the system. If the brew is not successful, power off the coffee maker and repeat these steps. If the problem persists, please contact service center. Reference the help center for additional information on how to use the De-Clog Tool.

5 If the display no longer says "CLOG", you can now go back to brewing.

a. If there are no grounds present or the display still shows "CLOG", go to Step 6.

6 If the Intelligent Clean Cycle Button is illuminated, see 'Cleaning & Descaling Your Brewing System' for instructions.

CHEC POD

- During a pod brew, the machine may stop and flash this message. This means that your machine may have loose grounds in it.

1 To resolve this, remove the pod and take the Ninja Pod Adapter out.

2 Wash Ninja Pod Adapter thoroughly with water to remove any leftover grounds.

3 Remove brew basket. Be sure to clean out any grounds from brew basket, then insert back into machine.

4 Place Ninja Pod Adapter back in brew basket. Run a water-only brew by brewing a 12 oz. classic drink. Once the brew is complete, you are now ready to brew another drink.

For best results, use bottled water and first-party pods.

End

- The brew cycle is complete.

Add Wtr

- The system does not have enough water in the reservoir to complete your brew. Add fresh water to the reservoir and then press the brew style button that was being brewed to resume the brew.

• If the reservoir is filled with water, remove and reseal the reservoir by pressing firmly down on the reservoir. If the issue persists, contact service center.

STOP

- A brew cycle was cancelled.

ERROR MESSAGES:

Er

- If the clock displays "Er" and then a number (ex. "Er 03"), contact service center.

There's sediment in my coffee.

- If using a permanent filter, this may be due to using finely ground coffee.

• To reduce the amount of sediment in the brewed coffee, use a slightly coarser grind or use a paper filter.

NOTE: DO NOT use a paper filter in conjunction with a permanent filter, as water and/or coffee can back up and clog the filter basket.

NOTE: To cancel the clean cycle, press the Power button or CLEAN button once. The brewer will beep and stop brewing through the cleaning mixture. Continue to follow the instructions starting at Step 6.

IMPORTANT: If you cancel the clean cycle, your brewer will not be properly descaled.

- 4 The clock will display and count down the remaining clean cycle time, which takes approximately 75 minutes to complete. Your brewer will deliver a small amount of cleaning solution to distribute through the system. It will then pause, deliver additional cleaning solution, and repeat this process for 75 minutes. The extended pauses allow for maximum cleaning and descaling.

IMPORTANT: DO NOT remove the carafe at any time during the clean cycle.

- 5 Upon completion, the brewer will beep, the clock will display End, and the Intelligent Clean Cycle Indicator will turn off.

- 6 Empty the contents of the carafe and place it back under the brew basket. Clean the water reservoir with warm, soapy water to remove any cleaning solution that could affect the flavor of your coffee.

- 7 Fill the reservoir with fresh water up to, but not exceeding, the Full line.

8 Flush the system by running a full carafe classic water-only brew. After the cycle is complete, discard the water and thoroughly clean the carafe and brew basket.

NOTE: Hard water will cause scale buildup faster than soft water and the brewer will indicate it needs cleaning more often.

Over Ice Brew is not cold.

- Ensure your cup, travel mug, or carafe is filled all the way to the top with ice cubes before brewing. Brewer will brew at elevated temperatures to lock in the best flavor, then the ice will cool the brewed coffee to the perfect temperature.

Cold Brew is not cold.

- Ensure your cup, travel mug, or carafe is filled all the way to the top with ice cubes before brewing. Brewer will brew at elevated temperatures to lock in the best flavor, then the ice will cool the brewed coffee to the perfect temperature.

Coffee is too weak.

- For stronger coffee, use the Rich brew setting. For an even bolder flavor, you can add more coffee grounds to the filter.

Coffee is too strong.

- For milder coffee, use the Classic brew setting. For an even milder flavor, use fewer coffee grounds in the filter.

My brew took longer than normal to complete.

- This may be due to the machine lowering the pressure to help prevent a clog. For best results, use bottled water and first-party pods.

Brew cycle is too slow.

- The brew time will vary based on size and brew style. Full carafe sizes and Rich brews will take longer to brew than single-serve and classic brews. The progress bar on the control panel will indicate brew progress.

Cup or travel mug overflowed.

- Refer to the Approximate Brew Volumes chart .

Brew basket overflowed.

- The bottom of the brew basket may be clogged. This can happen with finely ground coffee or too many coffee grounds in the filter. Medium-grind coffee is recommended.

• Using a permanent filter in conjunction with a paper filter can cause grounds to clog and water to back up in the brew basket. Use only the permanent filter or a paper filter.

• Decaf coffee grounds absorb water differently, so use fewer scoops when using decaf.

There is water left in the reservoir.

- When the reservoir is filled to a specific size and then that size is brewed, there will be some water left in the reservoir. This is normal to ensure the reservoir does not run dry for the best performance of the pump and brew system.

Brewer is leaking.

- After removing the water reservoir, there may be a small amount of water in the reservoir valve. This can be easily removed with a dry cloth.

• If the leak is coming from above the brew basket, refer to "Brew basket overflowed" above.

• If the leaking is coming from below the brew basket, close the drip stop.

• If the leak is coming from the bottom of the brewer, contact service center.

Intelligent Clean Cycle Indicator is illuminating orange.

- Run a clean cycle. If you have recently completed a clean cycle, you may need to run another cycle to remove additional mineral buildup that occurs naturally over time and is common in hard-water areas. Make sure you are using vinegar or a descaling solution and follow the cleaning instructions.

Brewer is not detecting the Ninja® Pod Adapter.

- Ensure the adapter is fully seated in place over the brew basket with the coffee maker lid closed.

Coffee is splattering.

- Some splatter is normal. Use the cup tray when possible to reduce the distance between the cup and the coffee outlet.

• Ensure the Ninja Pod Adapter is installed over the brew basket when brewing pods.

Water reservoir is unstable.

- Ensure the water reservoir is properly installed on the hook on the side of the brewer and pressed down firmly into the water reservoir base.

TECHNICAL SPECIFICATIONS

Voltage: 120V~, 60Hz
Power: 1550W
Water Reservoir Capacity: 70 oz.

NOTE: In order to ensure the highest possible standard for refurbished items, all units are thoroughly inspected as part of the process. For this item, water may be used during the refurbishing process and so; you may notice some condensation in the water reservoir. It is recommended to rinse the water reservoir with fresh water prior to its first use.
